Press Release du 27 October 2026

ILOQ at Préventica Maroc 2026 : Digital Access Control for Enhanced Security

- **How can digital access control solutions address the security needs of buildings, infrastructure and people within businesses ?**

  Digital access control enables organisations to manage precisely who can enter, where and when, while reducing the risks associated with lost, copied or unreturned mechanical keys. Access rights can be granted, updated or cancelled remotely, and audit trails improve visibility and accountability.

  iLOQ adds a further level of resilience with battery-free, cable-free solutions powered by the user's key or NFC-enabled smartphone. This helps protect people, buildings and critical infrastructure while simplifying administration, reducing maintenance and lowering lifecycle costs.

- **How does Préventica Maroc provide an opportunity to showcase innovations in global security and raise awareness of new technologies among Moroccan professionals ?**

  Préventica Maroc brings together decision-makers, security professionals and technology providers around the practical challenges facing Moroccan organisations. It is an ideal environment to demonstrate how intelligent, battery-free access management can strengthen security without adding cabling, batteries or unnecessary operational complexity.

  Through live discussions and product demonstrations, professionals can evaluate new technologies, exchange experience and explore solutions adapted to commercial buildings, public facilities and distributed critical infrastructure.

- **Why did you choose to support Préventica Maroc 2026 as a sponsor, and what do you hope to achieve through your participation in the event ?**

  We chose to support Préventica Maroc 2026 because the event connects innovation with real operational and security needs. Morocco is an important and dynamic market, and the exhibition gives us the opportunity to build local relationships, learn directly from professionals and show how iLOQ can modernise access management. We aim to raise awareness of secure, sustainable and easy-to-manage digital locking, develop strong partnerships and help organisations move from traditional mechanical keys to intelligent access solutions.

Interview with Jean-Noël Galliot • Managing Director, France – Africa ILOQ

About ILOQ

iLOQ is a Finnish technology company specialising in intelligent digital access management. Our battery-free and cable-free locking solutions are powered by the user's key or an NFC-enabled smartphone. Cloud-based tools enable access rights to be managed securely and efficiently across buildings and distributed sites.

iLOQ helps customers improve security, simplify administration, reduce maintenance and lower lifecycle costs. Our solutions serve residential, public and commercial properties as well as critical infrastructure.
